

INSTALLATION

For over twenty five years we have been installing lighting & sound equipment throughout the Midlands . In order to provide the complete turn key solution , we started installing theatre tracks and drapes as well. In more recent years we have included induction loop systems ,LCD data projectors and electric screens.

We are proud of our hard earned reputation for the quality of our installation work and after sales care.

Our lighting and sound work gained a District Council's Certificate of Commendation for sensitive installation in a Grade 1 listed church.

We deal with all sizes of projects and are quite at home supplying three lanterns or a small sound system to an infant school or village hall.

Our years of experience enables us undertake larger installations such as the performing arts venue at the new Matthew Boulton College. (as shown below)

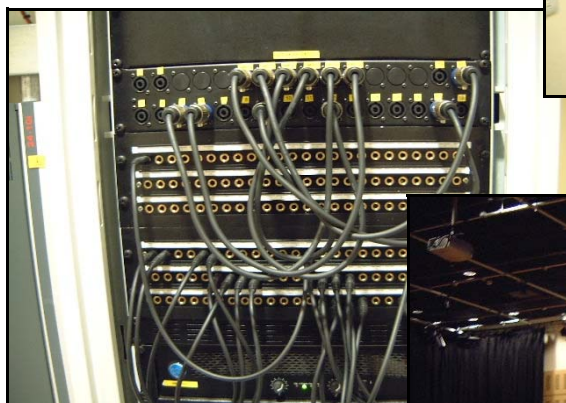

Whatever the size of project, (even if it is only in the planning stage), for further information or to arrange a free site visit , please contact our Sales team.

18 internally wired bars form the lighting grid.

The control room has five 24 channel dimmers , house lighting dimmer, Strand 300 desk and both audio visual patching and playback racks.

Part of the sound patch.

Projection screen & retractable seating.
